Abstract
Google Classroom for academic purposes supports an online learning platform. This research was conducted to investigate improving students’ reading comprehension by using Google classroom in STKIP PGRI Bandar Lampung. The questionnaire was responded by 30 undergraduate students in STKIP PGRI Bandar Lampung who learned English courses. The questionnaire was analyzed used by the researchers using SPSS. Google Classroom is suitable for learning activities, especially teaching EFL learners. Google Classroom can improve students’ reading comprehension and enrich learning activities. It can fit with the necessity of students in STKIP PGRI Bandar Lampung. It make their job easier as students.

Keywords: Google Classroom, E-Learning, learning

INTRODUCTION
The higher education students need new technology. They must connect the latest technology for study and reading purposes. However, new technology constantly changes students' lifestyles (Lintangsari et al., 2022). Students and teachers must follow technology in school or at university. If they do not follow the technology of web 4.0, they will be distressed to pursue current development. Nowadays, e-learning is the most favorite learning system that many scholars can use. Fikri et al. (2022) stated that e-learning could increase the effectiveness and efficiency of learning because it gives students a higher potential to communicate more with lecturers and colleagues and access more learning material. As a result, e-learning applications can be used as a device that can save students time. The students can organize time to use other valuable things. E-learning can increase students' social skills. The students can maintain their relationships inside and outside of the college. The students can add many new friends and relationships because of their learning through online courses.
The students also can teach self discovery and self-learning. Moreover, the students can complete the
 task, exercise, or exam by themself, therefore, making them more productive and more able to
 understand the material effectively. Online learning makes the students stay up-to-date with the new
trends.

One of the most used E-Learning platforms is Google Classroom. Google develops Google
Classroom for academic purposes that support a blended learning platform. Google Classroom is very
helpful and practical and presents newer challenges in continuing education in different ways for
teachers and learner. The Classroom is a Google Drive management system that supports a blended
learning environment to assign and collect digital work by integrating other Google products, Google
Docs, Google Drive, YouTube, Google Forms, and Google Calendar; in one place. This integration
allows class teachers and students to send and share office docs or multimedia files, do collaborative
projects, have online discussions, and have an online assessment. In Google Classroom, users can
create virtual classes after the course is designed. The user sends a class code to the students or
participants to join the class. The function can be as conventional class but save our time, space, and
fund. After that, teachers can share materials or assignments, and with Google Classroom, students
have the opportunity to share resources among themselves, submit assignments and witness their
progress. Besides, google classroom can offer tasks or duties. It can also share material and make
collaboration projects or tasks with our friends that one group with us or that is an individual task and
also can make a discussion in there.

Therefore, Google Classroom can improve their reading comprehension activity, although the
students and teacher can not meet or be in one room as classical learning and teaching. As the world is
surrounded by technology and the internet, youths today are part of a digital generation using mobile
phones, computers, tablets, and e-readers daily. Teachers use more E-learning applications to give
materials or assignments to students because they can not meet in face-to-face class and google
Classroom is easily accessible. The students can access it from laptops, pc, and mobiles. This
application provides a set of advanced features that make it the ideal tool for use with students. This
application helps teachers save time, keep classes organized, and improve student reading
comprehension. This application is available for everyone with google apps for education and a series
of free productivity tools, including Gmail, drive, and document, because all activity is now in the
digital era. Many teaching materials or lesson materials can be accessed on the internet. Many people
can find the source material easily on education sites, e-books, or the internet. All the materials can be
accessed using a payment method or for free. Therefore, many benefits can be acquired by scholars in
the 4.0 era.

The existing literature mentioned above reflects that utilizing Google Classroom has been
widely spread in many educational institutions worldwide. Google Classroom is very easy to use and
help teacher and students in their teaching and learning activity especially in reading comprehension.
The educators saw the traditional method of learning and teaching as better than the online method of
learning and teaching. The students’ reading comprehension is very satisfied because teachers or lecturers can evaluate after knowing the results of student understanding. The teacher can also check their students' tasks or assignments using google classroom that is connected with other google apps., such as Google Form, Google Spreadsheet, and Google Drive. Therefore, it can be automatically marked in google classroom when the teacher wants to mark the tasks and assignments of their students. As a traditional method, the teacher does not need to check one by one.

METHOD

This study is quantitative research. Quantitative research is systematic scientific research on parts and phenomena and their relationships. The aim of quantitative research is to develop and use mathematical models, theories and/or hypotheses related to natural phenomena. The measurement process is a central part of quantitative research because it provides the fundamental link between empirical observations and the mathematical expression of quantitative relationships, Cresswell (2003).

This study used a questionnaire as a research instrument to collect the data. The researchers adapted the questionnaire from Hastomo et al. (2022) research instrument. Moreover, the researcher conducted the reliability and validity test before using this questionnaire. The students answered the questionnaire through the online method. The questionnaire was responded to by 30 undergraduate students in STKIP PGRI Bandar Lampung who learned English education using Google Classroom during a year. The participants consisted of 30 undergraduate students and the undergraduate students completed the questionnaire.

Google Forms was used to make a questionnaire after the questionnaire was made. Moreover, the questionnaire was shared to the students, and they could use a link that accessed the Google Form site. The students must answer thirteen questions. The questionnaire was analyzed used by the researchers using SPSS version 25. The Cronbach Alpha calculation was conducted to test the accuracy of the questionnaire. Some observations are used to explain descriptive statistics to give the readers an understanding of the fundamental characteristics of the data. Furthermore, the researcher making description of the data that has gotten from the SPSS.

FINDINGS AND DISCUSSION

Findings

This part contains the results of data collection through questionnaires from 30 undergraduate students. It describes the results and discussions outlined in the form of paragraphs. It showed that the participants had used Google Classroom as media to learn during one period. The result also shows the participants understood using the Google Classroom component and the participant agreed that e-learning using Google Classroom could be used during a period. The demographic of the participants is shown in Table 1.
Table 1. The Participants Demography

Based on the table above, seven males and 23 females answered the questions. All participants, only 27.7% derived from the second semester, 23.3% from the fourth semester, and a half from the sixth semester. The questionnaires consist of the question about students’ reading comprehension of using the elements of Google Classroom in the teaching process, shown in table 2.

</table>
From the table’s result above, half of the students, or 50%, choose neutral, for google classroom can provide additional material. The rest all decide to agree (23.33%), strongly agree and disagree (10%), and strongly disagree (6.67%). In this research, 66.67% of the students choose neutral for Classroom can improve the quality of communication between teachers and students. Using Google Classroom is a fun activity, and the students have a wide variety of answers, such as 43.33% for neutral, 23.33% for agreeing, 13.33% for strongly agree, and 10% for disagreeing and strongly disagreeing. Furthermore, 50% of students strongly agree that Google classroom fits perfectly with today’s education levels, and almost 70% strongly disagree that Google Classroom can replace face-to-face learning. Many students strongly agree and agree (33.33%) that the Google Classroom application can be used in all subjects.

The result also shows that 43.33% of students choose neutral when using Google Classroom the quantity and quality of the material obtained do not match the time spent studying. Furthermore, 40% of students strongly agree that Google Classroom can provide flexible time access to study materials and assignments. After that, Google Classroom can be used today and, in the future, and will become an integral part of the educational process, 33.33% of the students choose to agree.

Moreover, 63.33% of students agree that Google Classroom is suitable for the study field. Also, 33.33% of students agree that Google Classroom allows for more effectively organizing of the learning process. Google Classroom enables more modern use of teaching resources. Many students agree and are neutral (33.33%). And the last question, using the Google Classroom platform all the time is very unpleasant and tiring. Almost all students strongly agree (83.33%) and agree (6.67%), and neutral, disagree, and strongly disagree 3.33%.

**Discussion**

Based on the result above, the researcher found that Google Classroom provide additional material, and this learning media can use modern teaching resources. Google Classroom can be used now and in the future. It becomes an integral part of the educational process because Google Classroom can be used for teaching many subjects and fits perfectly with today's education levels. Using Google Classroom improve the quality of learning. E-Learning using Google Classroom is very unpleasant and tiring, and the quantity and quality of the material obtained does not match the time spent studying. Learning using Google Classroom is a fun activity more effectively organize learning. Google Classroom replace face-to-face learning in school because the material can access every time and every where. This statement is supported by Hastomo et al. (2021) who stated that Google Classroom is educational media that support teaching, learning, and comprehending activities for students.

Students very commonly use Google Classroom. Many students agree with the benefit of Google Classroom. Mansur & Asmawati (2021) stated many benefits of using Google Classroom for teaching English, such as the practicality, features, and simplicity that can support the e-learning environment. The students feel that Google Classroom fits with today’s learning and is also effective
for studying or collecting tasks or assignments without spending much time. They also find Google Classroom can replace face-to-face learning because it saves time, energy, and fund. But it must be mixed with the face-to-face meeting. To decrease the bored of the students because they are too often learning in Google Classroom.

Moreover, the students could also comment on many posts, brainstorm the discussion, and interact with their classmates because Google Classroom offered them a responsive and safe learning platform. If the students were running out of time, Google Classroom could provide the learner to practice and discuss the material outside the Classroom. This statement was supported by Sukmawati & Nensia (2019), who stated that teaching-learning activities could be conducted effectively using appropriate educational technology.

Furthermore, the student's reading comprehension was influenced by the flexible access to Google Classroom material (Albashtawi & al Bataineh, 2020). They can access all the content of study without coming to the Classroom. The students also stated that they could answer the assignment and quiz effectively because they immediately received feedback, such as comments and suggestions from the instructors. Moreover, they also could submit their assignment after editing their work frequently. Therefore, Google Classroom became favorite educational technology because of the flexible access to the material. The previous research by Novita Eka (2022) is effective for teaching as long as the teacher can maximize the function of google classroom.

CONCLUSION

The results of this study from the questionnaire showed that Google Classroom could be used in e-learning every time. Google Classroom is suitable for conducting learning activities, especially for teaching the learners. Moreover, Google Classroom can improve students’ communication, enrich learning activities, and enhance students reading comprehension through content and material.

Google Classroom provide additional material, and this learning media can use modern teaching resources. Google Classroom can be used now and in the future. It becomes an integral part of the educational process because Google Classroom can be used for teaching many subjects and fits perfectly with today's education levels. Using Google Classroom improve the quality of learning. E-Learning using Google Classroom is very unpleasant and tiring, and the quantity and quality of the material obtained does not match the time spent studying. Learning using Google Classroom is a fun activity more effectively organize learning. Google Classroom replace face-to-face learning in school because the material can access every time and every where. Google Classroom is educational media that support teaching, learning, and comprehending activities for students.

Furthermore, all the students agree that Google Classroom can fit with the necessity of English Education students in STKIP PGRI Bandar Lampung. Many students think that Google Classroom is very flexible and practical for online learning. They can learn beyond the place and time. Google Classroom can be suitable with modern resources. Therefore, the students feel that
Google Classroom can make their job easier, improve their reading comprehension, self-learning, and enhance the communication between the students and the teachers.
